It has been popular with CAD users since its release, and continues to be the most popular desktop CAD application in the world, according to StatCounter. For many years, AutoCAD Product Key was considered a professional-level CAD product, although as CAD software began to get more widespread use and popularity in the early 21st century, the definition of "professional" began to change, and AutoCAD began to be considered a "Standard" CAD application, rather than a "Pro" or "Enterprise" CAD product. Autodesk claims that on average, Autodesk customers use AutoCAD for 20,000 hours per person annually, a figure that has been steadily rising in recent years. Some of the features of the most recent version are listed here, but this article does not include the details of all of the features that are available in AutoCAD. Developer:Autodesk Publisher:Autodesk Price: Free and Paid Versions Official Website:Autodesk Feature Comparison A list of feature comparisons between AutoCAD 2016, AutoCAD LT 2016, and AutoCAD for Windows, AutoCAD 2017, AutoCAD LT 2017, and AutoCAD for Linux, AutoCAD for macOS and AutoCAD R2018 is included below. Dispensers If you work in a factory, for example, it's often necessary to use dispensers to pass materials between workstations. AutoCAD has a "Dispenser" feature that allows you to create a collection of components that you can call up and use for any given drawing. You can save a collection of components with a preset name and then use those components on any other drawings that you want to reuse the same materials. In the screenshot below, the materials "screws and hex nuts" are created using the "Dispenser" feature, and they are saved with the name "dispenser." 3D Views You can use the 3D views to quickly view the 3D model of an object in a drawing. The 3D views feature in AutoCAD allows you to see the 3D model as it is in the drawing that you are creating. For example, if you make a section through the design of a house or a plant, you can use the 3D views to see that section as a solid 3D model. This can be useful if you want

Features AutoCAD 2011 has a number of features for designers and project managers: Vector graphics AutoCAD can display and edit vector graphics, including the ability to zoom and pan between objects and on a map. The ability to edit the geometry of the graphic without destroying its edges or points was achieved by the use of a new technology called Smart Point, the "world's first auto-detectable, editable, linkable, and redrawable point class". A number of predefined methods have been provided by AutoCAD to keep the lines straight and geometry clean and consistent. These are available by default, but can be turned off in the application settings or through third party applications such as SolidWorks and other drafting applications. While vector graphics can be viewed and manipulated, AutoCAD cannot be used for the creation of vector graphics, such as by the use of the pen tablet. An example of the vector graphic display is a partially traced out line in red. Layouts A layout is a

construction of a drawing to be printed on a pre-printed template. A layout can be printed as a sheet with multiple drawings. Multiple drawings, or even one large drawing, can be created as a layout and multiple layouts can be printed with a single pre-printed sheet. Layouts are supported in AutoCAD since AutoCAD 2005. A typical use of this feature is to create a sheet of plans and/or elevations of a house that has been printed on a large sheet of paper. AutoLISP AutoLISP is a proprietary programming language used in AutoCAD and various third-party AutoCAD-based products. It is a functional extension to LISP as defined by the Common LISP or ISO Common Lisp specification. The application supports all AutoCAD functionality including creating drawings, and support for AutoLISP has been added to other AutoCAD-based products such as Allplan, VectorWorks and PowerStation. AutoLISP can be used to implement custom extensions to AutoCAD. Measuring tools AutoCAD includes tools for measuring, laying out and drawing on a specified point or surface. Measure The Measure application allows the user to select or create an object, then take measurements of it. If the object has a text dimension, the user can edit this value. Freehand The Freehand application allows a

The Supreme Court justices seemed skeptical on Thursday when lawyers for President Trump's administration argued that the president should not be required to turn over his tax returns to congressional committees. The justices had a question for the administration: If Trump refused to hand over the documents, "what else could he do?" It was left unclear whether the justices will ultimately decide that such a decision is a president's alone to make, or whether Congress has the power to enforce its oversight of the executive branch. The Supreme Court heard arguments on Thursday over whether Congress can obtain Trump's tax returns. The arguments came in a case brought by Rep. Richard Neal, a Democrat from Massachusetts, who is chairman of the Ways and Means Committee. The committee is part of Congress and can obtain tax documents. Neal argued that a tax document is a public record and that, therefore, Congress has the power to request it from the treasury. "It's the broadest in class congressional request for the returns ever," Neal said in court, referring to the broad language of the request. Neal's argument was swiftly rejected by the president's lawyer, who argued that the committee does not have the power to request tax documents. "The president's lawyers argue in the strongest terms that they can't give him an opinion on whether this request is valid, because they're not parties to the investigation," Neal's lawyer, Scott Park, said in court. The dispute stems from the now-aborted effort by former IRS official Lois Lerner to defy congressional investigators. She's being prosecuted by the Justice Department for contempt of Congress after refusing to testify about the IRS targeting of conservative groups. Neal has requested six years of Trump's tax returns, while his committee can only request one year at a time. Neal said the committee would not try to get the other years through administrative process — for example, by asking the IRS for
