iOS (Autodesk iDoc) supports a cloud service called iDoc Central that allows collaborative editing with peers. This is also available on Windows, macOS, and Android operating systems. Autodesk has also released the free edition of AutoCAD: Autodesk Architectural Desktop, an architecture and engineering CAD program that is optimized for architectural and engineering workflows. The free edition is targeted at people looking for a way to create basic drawings and 2D architectural drawing images (not 3D), and has limitations on types of work and required features. It also includes some basic templates and design tools to allow users to create and edit 2D drawings. AutoCAD standard AutoCAD standard is a series of specifications written by the Autodesk Technical Staff. The first AutoCAD standard, Autodesk Application Programming Interface (API), was the first specification of the type. It was published in 1991 and introduced a stable environment for developers to develop their own products. The standard was later revised and the second edition, AutoCAD API 2.0, was published in 1994. The language used to specify AutoCAD APIs has evolved over the years and the latest version, AutoCAD 2019, includes a Graphical Layout API. AutoCAD standard is described in the Autodesk Application Programming Guide and in an online book called "AutoCAD: The Language of CAD" from Prentice Hall. AutoCAD standard is documented in the Library. List of available

standard components and commands is available. The standard is a work in progress. One major change in AutoCAD 2019 is the introduction of the new Graphical Layout API. For developers, this new API makes it possible to manipulate the graph and layout features of drawings without the need to develop extensions. There are also new services in this new API, such as the Layout Manager. AutoCAD standard is documented in the Library.
