This application allows you to take any midi file you find on the internet and morph it into a new song that sounds almost identical to the song you are listening to. It preserves the structure of the song you are listening to so that when you play the song it sounds almost like a new song. It does not change the midi file or music or remove or add anything to it. The player plays the midi file as it is, with the ability to change the volume and

panning if it is too loud or too soft. The user has the ability to change the pitch, modulation, speed, etc. of the song and he or she can make the song whatever the user wants it to be. The application has a number of preset options so that the user can make the application fit his or her needs exactly.
