

What is an emulator. you need to make a special emulator and add the details of the reg file to this @hp3hp3. 1. Check if the sentinel driver version 7.5.0 or higher is installed 2. Install the sentinel driver if it is not installed 3. Create a folder structure C:/dev/cpu and C:/dev/video. If you already have these folders, then create new ones on another partition. 4. Make sure the C:/dev/cpu directory is empty. 5. Follow An emulator (emulation) is a program or hardware device that imitates the operation of another device or process. Emulation may be needed to test programs or to mask what is actually happening on the system.
