## ShellFTP

Files and folders can be uploaded from anywhere using ShellFTP. It is meant to be fast, easy to use, and reliable. We'd love to hear your feedback. You can use our source to implement the latest and greatest ShellFTP features. Features: - Fast upload using threaded multi-threaded CGI script - Scheduling - Filtering - Integrated with Windows Explorer for quick access - Provides UI for easy configuration, especially for novice users - Very flexible, you can upload to any destination, define the structure of directories and files, and much more - Strong security and authentication features - SSL encryption - SOCKS4 and SOCKS4A support - Save all uploaded files to disk for later review, browse using any FTP client, or backup using our unique scheduler - Integrated into Windows Explorer to avoid double-clicking in the File-open dialog - Free to use - Many free features are planned and under development - Good for HIPAA Compliance - Small footprint - Compatible with multiple operating systems, including: Windows, Linux, and Mac OS X - Open-source - Uses a C programming language, with a Perl interface. The basic interface is written in C. Additional features: - Cloud and S3 Storage - Run as a Windows Service - Cronable Schedule - Fast Multi-Threaded - Encryption of passwords - Customizable output - PipInOut - Copy URLs to Windows Explorer - Kill-it-Now upload - Option to allow periodic uploads - AutoClose - SockS4 - SockS4A - Recycle Bin support - Integrated ClamAV engine - Schedule tools - Multiple schedulers available - More ShellFTP is now available for purchase! Contact us today to purchase ShellFTP. Current Features Version 3.2.4 - Ability to delete/recreate links to files - AutoUpdate to latest version - Bug Fixes Version 3.2.3 - Added cleaning up of temp. files - Added AutoClose to run program from another process Version 3.2.1 - Added deletion of files after upload - Updated to XHTML3 - Various Bug Fixes Version 3.2 - Moved to XHTML3 - Improved external data handling - Increased code compactness - Added new features - Bug Fixes

### What's New In ShellFTP?

ShellFTP is a useful and versatile FTP engine specifically designed for fast uploading. It is engineered to maximize productivity and bridge gaps in the website development process. It does this by integrating with your work environment, so that it is readily available when you need it. ShellFTP inserts a new item in the right-click menu for files and folders, allowing them to be uploaded to your server quickly and automatically. You may leave it minimized and still command it with Windows. This is faster than any similar program. You could copy the path of a file, have ShellFTP open and add it to the upload queue. You could leave it open and automatically upload files into paths determined by their file extensions. ShellFTP can launch an FTP browser directly to the location of your last upload, for changes or mistakes. The utility itself integrates via the command-line and interprocess communication and can be used to schedule upload or used accordingly. ShellFTP is secure and firewall friendly, supporting 128-bit SSL encryption and SOCKS4/4A proxies. In addition to what is currently available, Sunlit will be releasing free extensions to this program. Here are some key features of "Sunlit ShellFTP":  
☞ Launches from the right-click context menu  
☞ Creates and copies links for files uploaded to your webserver  
☞ Filters these links into HTML for images, links, Flash animations and more  
☞ Uses SSL/TLS for secure connections (making it HIPAA compliant)  
☞ Optionally filters certain file types into certain remote directories  
☞ Saves and uses multiple site profiles  
☞ Uploads entire folders and maintains their structure  
☞ Encrypts FTP passwords  
☞ Stores all external data in XML files, base program is machine-independent  
☞ Can automatically begin uploading and close when finished  
☞ Can be copied to portable media and used on-the-go  
☞ Can stay loaded and accept new uploads through interprocess communication (faster)  
☞ Can be used in conjunction with a scheduling application or script. Completely commandline controllable.  
☞ Can stay loaded and accept new uploads through interprocess communication (faster)  
☞ Uses SOCKS4 and SOCKS4A proxies  
☞ Has a flexible URL copying mechanism  
☞ Supports resuming  
☞ Full documentation of program provided in a convenient help file.  
☞ A few more exciting but secret features are planned in upgrades for our users! File Size:2.34 MB Added:10/09/2011

## System Requirements For ShellFTP:

Minimum: OS: Windows 10 64bit. (Windows 8.1 32bit is not supported) Processor: Intel Core i3-5010U or AMD equivalent Memory: 2 GB RAM Graphics: NVIDIA GeForce GTX 660 or AMD Radeon HD 6950 Network: Internet Connection Hard Drive: 2GB available space Recommended: Processor: Intel Core i7-4790 or AMD equivalent Memory:
