## **AutoCAD License Code & Keygen**

Platforms Cracked AutoCAD With Keygen is available for use in Windows, Unix, Unix-like, and Mac OS X platforms. Concepts Key concepts in AutoCAD include: 3D and 2D modeling Paper space Drafting geometry and tooling Layer and tabbed drawing Drafting Printing and plotting Geometry Basic drawing Layers Panels 2D Design Features Rectangular and circular dimensions Boolean operations LISP Visual LISP Interchange Format (.ifc) Internal file format (.ai) .NET framework Drawing AutoCAD starts with a blank drawing, a vector drawing consisting of nodes, lines, text, and dimensions. This drawing can be edited by using a selection of tools, such as the line, arc, rectangle, circle, ellipse, polyline, and polygon tools. The user can modify a drawing in one of two ways: editing tools and templates. The editing tools enable the user to move, rotate, and scale geometry. These include tools for creating and editing spline curves, polylines, arcs, circles, rectangles, and polygons. The drawing templates include default shapes for creating doors, roofs, walls, furniture, and more. A new layer is the most important unit of information in AutoCAD. The user can create multiple layers, and each layer can be set to a specific color. AutoCAD uses color to identify important objects and portions of a drawing. This allows the user to easily identify these objects as the drawing is being created or modified. AutoCAD is also able to use the information in the drawing as constraints for other drawings. The user can tag the drawing for use as a template. This template can be used to draw the same geometry on another drawing. The template can also be used to modify the second drawing, based on what was originally planned for the drawing. The user can create 2D (2D) and 3D (3D) templates. Within the drawing, points and dimensions can be added, edited, and deleted. The user can create and edit dimensions to include width, height, and angle. ## What's New In AutoCAD?

With Markup Assist, the drawing markup will be updated automatically if there are any changes to the text in the textbox, including changes to the font, font size, kerning, and text justification. (video: 1:30 min.) Drawing marks are both dynamic and flexible. Dynamic drawing marks are based on the current state of the drawing. For example, you can draw a line from the cursor location to a new location. If you change the size of the line before it is released, it will automatically update to fit the new size. (video: 1:45 min.) Markup Assist also supports text-based tracking marks that automatically update as you move the cursor, creating new text and removing existing text. (video: 1:50 min.)
