Last week, a man reportedly died and another was seriously injured in a crash on a Marine Corps base in Texas. The man died after he was hit by a SUV driven by another Marine, who was also injured, according to a report in The Associated Press. MARIJUANA EXPERIENCE Coverage of recreational marijuana's growing popularity has been intense. A Washington Post fact-check of a Republican presidential candidate's claim that he didn't believe in recreational marijuana was "not true." A crowd of marijuana activists took to the steps of the U.S. Capitol last week to protest a federal prohibition on the drug. MILLERMAN A federal judge said the Department of Justice overstepped its authority when it issued a broad federal indictment of five Maryland counties on Election Day last week. The counties were charged with conspiracy to obstruct federal voting rights laws. The Justice Department alleged that the counties' election boards "prevented and attempted to prevent Prince George's, Montgomery and Howard Counties from allowing registered voters to cast ballots on election day," according to a report in the Washington Post. AMERICA FIRST President Trump's National Security Strategy, released last week, spoke of a need for American capitalism to play a more assertive role in the global economy, to the consternation of critics who argued such an approach could hurt consumers and workers. "Our strength, our influence, and our prosperity are all tied to our ability to work with the entire world," Trump said in the strategy. He also said there would be "peace through strength." FULL OF FLAVORS The U.S. House of Representatives approved a House-Senate compromise bill to fund the government through the rest of the year. The bill included a slew of provisions, including loosening immigration rules for guest workers and increasing legal immigration for the first time in more than a decade, according to The Associated Press. As the dimensions of interconnects decrease, the RC delay of the interconnects becomes a major design factor. As a result, the use of low dielectric constant (low-k) materials has become more attractive, because they provide a relatively low-RC dielectric constant with respect to silicon dioxide and they can enhance device speed by reducing capacitive effects caused by the high RC. Therefore, the use of low-k dielectric materials in the interconnects is necessary to enhance the density of integrated circuits. In addition, the development of low-k dielectric materials that are suitable for use in the manufacturing of microelectronic devices, such as integrated circuits, has been driven by competing technical requirements. The requirements to be met by these dielectric materials include reduced dielectric constant, reduced film stress, reduced film hygroscopicity, reduced diffusion of copper, or other highly conductive metals, and good adhesion to other materials. To this end, the integration of organic and inorganic components into the dielectric material has been proposed. The incorporation of silica with organic materials results in a composite film of reduced dielectric constant and good film stability due to the high hydrophobicity of the silica; whereas the incorporation of silica with an inorganic material such as silicon nitride results in a composite film of low dielectric constant. However, the fact that the relative dielectric constant of the low-k die
