### What's new:

**That Could (KUMO's Little Robots) When I first saw this little robot, I thought, "What a neat little oven." Maybe I misjudged it, but I think this little oven robot has a lot of potential for both the kitchen and the future of robotics. It is small enough to move around your kitchen and is not too complicated to operate and program. At first glance, you wouldn't think that this little oven needed to be adorable, but it got me thinking, what would a little oven robot do if it could talk and the temperature was stuck at 350 degrees? How hard would it be to make an oven robot talk? What's the coolest thing about these little robots? One of the coolest things about these little robots is that they can talk. They do not only have one voice but two. One voice is for "Oven on" and the other voice is for "Oven off". After the first "Oven on" there are two more "Oven on" voice options. The temperature of the oven can also be called up to two digits and the temperature options are: 350, 400, 425, 450, 475 and 500. So far, the robot "Oven" does not actually understand what it is saying and if you tell it the temperature is "Hot", it would say "Hot" and "Hot Hot Hot Hot" and probably start running around the kitchen. Actually the lexically most correct way of telling the robot to turn the temperature up is to say "300 degrees hot". "So the temperature units are mbar and the temperature settings are from the digital display. The temperature bar also light up and turn green for degrees above 350 degrees. Another cool feature is that it does not require a separate control wire or the smart home hub in the kitchen. It does not need a separate hub and it can be controlled by voice and also my smartphone. Currently, KUMO does not talk so the temperature can only be controlled by your voice. It does call "Oven off" when it is done cooking. The minimum temperature that a food can be left in the oven for is 350 degrees fahrenheit and the maximum is 500 degrees fahrenheit. The duration that a cooked food can be left in the oven between 350 and 500 is thirty minutes. So, robot time will**
