AutoCADPeripheral neuropathy induced by diquat and pralidoxime: a quantitative in vivo study. Pralidoxime is an oxime that is known to react with the toxic acetylcholine metabolite acetylcholine and is given therapeutically in the treatment of organophosphate poisoning. To study the effect of pralidoxime on peripheral nerve function, diquat poisoning was induced in rats by injecting 10 mg/kg of diquat intragastrically. This induced a complete functional motor

peripheral neuropathy. The rats were treated with pralidoxime 30 min after the diquat injection. Motor function was assessed by the Hobert test, toe spread test, and sciatic nerve electrophysiology. These tests showed a functional motor peripheral neuropathy, with recovery within 4 days after the treatment. However, pralid
