AutoCAD was originally developed by Bill McKelvey, who was then an architect and surveyor working for Allyn & Bacon. He and one of his colleagues, John Lewis, had bought a copy of Micralis 5 for the Apple II, the first commercially available graphics-oriented desktop microcomputer, and were experimenting with it. With the help of a graphics expert at Allyn & Bacon, Allan Tompkins, the two men decided to develop a CAD program for Apple II, using Micralis as the drawing environment and Tandy's Data Display System (DDS) to display their drawings on the Apple II screen. McKelvey later recalled that Tompkins had done similar work for CACI, a software and hardware company based in Naperville, Illinois. Tompkins' contributions to the development of the original AutoCAD, first conceived of as CAD for Apple II, consisted of showing the two men how to use Micralis and the DDS. The Apple II version of AutoCAD was only one of two products—with CACI's Pipe Flooring Software—developed by McKelvey and Lewis for CACI. CACI, in turn, was acquired by Allyn & Bacon in November 1982. The deal included buying the Apple II version of AutoCAD and certain other CACI software products. Because of the complex technological needs for AutoCAD, it took several years to develop the first version of AutoCAD for Apple II. The original version was released in late 1983. It was the first full-screen, menu-driven, menu-driven graphics-oriented CAD program available for the Apple II. The Apple II version of AutoCAD was included with the Allyn & Bacon's Engineering Workstation, a specialized workstation for engineering design, development, and simulation. Before AutoCAD, there were other commercial products for the Apple II including the Aurora interactive graphics board and its companion, the Aurora graphics system. The Apple II version of AutoCAD included the Aurora, and was incompatible with the Apple II version of Aurora. The Aurora was discontinued in 1983 and the Aurora graphics system was replaced by the Macintosh 512K. The Apple II version of AutoCAD was made available in a smaller version of the Engineering Workstation, the Computer Workstation. The Computer Workstation was only available with the larger Apple II Model 100, Model 200, and Model 300 computers. The Computer

What's New In AutoCAD?

Object-Oriented Design: The single most-requested feature in CAD since the first release of AutoCAD in 1982 is now a reality. The ability to create and edit classes and objects is now a native feature in AutoCAD. Add new, edit existing, or change class properties. (video: 2:09 min.) **Key-Controls:** Use the new Windows+ modifier key for command-line-type functionality, such as cutting, pasting, and Z-Orienting. This functionality is supported in all AutoCAD and AutoCAD LT applications and is being introduced to the companion AutoCAD Architect app for iPad (it will be available soon). (video: 1:51 min.) **A1-Pivot:** A1-Pivot is an interactive tool for quickly and easily model (or sketch) complex two-dimensional objects or assemblies of objects. You can use A1-Pivot to define the initial assembly, then define the members and join the members together. (video: 1:20 min.) **Visual Preview:** See how a change will look in real-time and adjust as needed before you apply the change. The new visual preview feature is available in AutoCAD and AutoCAD LT as well as the Autodesk Device Previews app for iPhone and Android. (video: 3:01 min.) **Embedded Microsoft Excel:** Embedded Excel functionality is now available in AutoCAD LT and AutoCAD and is available in the AutoCAD and AutoCAD LT companion apps for iPad. (video: 2:16 min.) **PDF/HTML Filter:** PDF filters now allow you to use the HTML character set and apply special handling to the characters as needed. This new feature is available in all AutoCAD and AutoCAD LT applications and will soon be available in the companion AutoCAD Architect app for iPad.
