Developed in the mid-1980s, Adobe Photoshop was intended to be an improved version of the MacPaint program first released in 1979. Although MacPaint is available for Windows, Photoshop eventually evolved into a full-blown graphic design application. It was initially offered for the Apple Macintosh platform but was later also ported to Windows. Photoshop is very popular in the graphic design community, with professional photographers, artists, and illustrators who create digital artwork as its primary users. The application was first released for Macintosh in October 1987. Adobe Photoshop has been available as a desktop application, as well as a web application and a mobile app. Photoshop is also an Adobe Creative Suite (ACS) product, meaning that it is bundled with Adobe InDesign and other products that are part of the Adobe Creative Suite. Other members of the suite include Adobe Illustrator, Adobe Flash, and Adobe Acrobat. (IT) Infrastructure Adobe

InDesign is a fully featured page layout application, initially intended as a replacement for Microsoft Publisher, the widely used page layout and document production software from the early 1990s. InDesign was first released in June 1998. Adobe InDesign is used by graphic designers, web designers, advertising agencies, and magazines. It is particularly useful for layout and design, proofreading, and publishing work. InDesign was initially available for Microsoft Windows, macOS, and the then-popular BeOS operating system, and later ported to Linux, a feature supported by later versions of InDesign for Mac. Adobe InDesign is also available as a mobile app. Adobe PageMaker is a desktop page layout application first released in 1997. Originally intended to be a replacement for Adobe PageUp, PageMaker was derived from a program called Paperspace. Pages are created by dragging and dropping objects, and a number of templates are available. Adobe PageMaker is mainly used by hobbyist and small-business owners who want to create a number of books or brochures. It is also used by educators, who teach students how to create pages. Adobe InCopy is a desktop page layout application released in 2002. It was originally designed to replace Adobe PageMaker, but since then it has largely been developed in parallel with it. Adobe InCopy is used mainly by people who want to create a number of books or brochures. It is also used by editors who work with print publications, which allows them to create page layouts in the desktop
