The Autodesk 2020 release of AutoCAD includes a number of features for introducing design intent to non-CAD users. These features include augmented reality (AR) and mixed reality (MR) tools and integrated design tools. In addition, as part of a broader software-development practice known as enterprise design, Autodesk introduced a cloud-based release and product management workflow. Enterprise design, which includes traditional product development and delivery strategies as well as the use of cloud computing to deliver software, is designed to help Autodesk meet the challenges of delivering cloud-based software, services and content. As part of Autodesk's 2020 release, some of its 2019 offerings have been completely redesigned and updated. This article discusses the implications of enterprise design and AutoCAD 2020 for professional CAD users. Autodesk 2020 Release: Enterprise Design In the last article, we discussed the concept of enterprise design as it applied to the broader CAD market. With enterprise design, Autodesk has redefined product development as well as how it operates and what it offers its customers. According to Kevin Reid, a product development specialist with Autodesk, enterprise design has three components: On-premises product development Cloud-based product delivery Cloud-based product management On-premises product development Autodesk product development is based on two primary product life cycles: product development and product maintenance. Product development, which can last from 2 to 5 years, involves defining a new product strategy; determining a set of product features; developing and designing the product; testing and validating the product; and managing the product through its life cycle. Reid said that the new Autodesk 2020 release of AutoCAD is the first in a series of enterprise-design releases that should help Autodesk meet the challenges of creating cloud-based products. "As a traditional manufacturing-software provider, Autodesk needed to differentiate itself from the competition by developing a product with a unique user experience and business model," he said. "We're not just developing the app for users to download from the App Store or from Microsoft's website. We are defining a new cloud-based product experience and model to help our customers use our products on any device, with any operating system, any browser and from any location. That's a big challenge, and enterprise design is a big part of that." What does this mean for CAD users
