What's New in the AutoCAD?

Markup Import and Markup Assist are new functions in AutoCAD 2023 that make it easier to incorporate feedback from printed paper or PDFs into your drawings. The Markup Import and Markup Assist function gives you the ability to import feedback from printed paper or PDFs into your AutoCAD drawing and then automatically merge those edits into your drawings without the need to save and reopen. When you import feedback, you can adjust the scale of the imported objects to match the size of your drawing. You can also preview the imported objects in the drawing and review the actual changes made. If you find a way to fix the changes to the objects, simply import the changes and send them to production. When you finish incorporating changes from feedback, you can export the drawing and print it or make sure you have a backup copy. In addition to printing, the best way to distribute feedback is to add comments to the drawing itself. When you update the document with comments, you can track the comments over time and make it easy to find. With new features in the Markup Assist area, you can easily save your review comments from drawings to a report or searchable database. You can search for any type of information in these reports and save the search results to make them available whenever you want. When you're looking for answers or want to check on how something is being used in your organization, Markup Assist can save you time. When you're ready to import feedback from print or PDF, simply select the Markup Import command. If your feedback was uploaded to a database, or you have it on your desktop, you can select it for import by selecting the Import from File or Folder button. After you import the feedback, you can search for any objects by name and easily find them in the drawing. The Markup Assist function helps you analyze your design changes from your last revision, such as making sure you've got the right scale and objects. You can search for any object you want and determine whether you need to make changes. This helps you use your comments to keep everyone working on the same design. You can adjust the scale of imported objects to match the size of your drawing. This makes it easier to edit imported objects and find them in the drawing when you import them. If you want to edit the imported objects
