Â A: The reason why your block is not printed is that the second argument of print is a block, which means it doesn't print the body of the block. Use local f, msg = {table.insert(table.view(3,n))} print(table.concat(f, msg), " ") Instead of local f, msg = {table.insert(table.view(3,n))} print(table.concat(f, msg) See for details. The present invention relates to the art of electrical connectors and,

more particularly, to a modular, electrical connector assembly having improved retention and/or electrical interconnection of its various components. Modular electrical connectors are well known in the art, as are associated restraint mechanisms to maintain them in assembled relationship. Examples of these are shown in the following U.S. Pat. Nos. 4,772,220; 5,345,927; 5,663,523; 5,810,205; 5,831,334; 5,839,588; 5,846,869; 5,971,678; 5,996,096 and 6,003,365. While these devices are generally satisfactory, it remains desirable to provide a modular connector assembly having enhanced electrical and/or mechanical interconnection. It is therefore an object of the present invention to provide an improved modular, electrical connector assembly. Another object of the invention is to provide such a connector assembly having improved mechanical and electrical interconnection. Yet another object of the invention is to provide such a connector assembly with enhanced electrical and mechanical interconnection between the associated electrical contacts of its various components. These and other objects of the present invention will become apparent from the following description of the invention. In one aspect, the present invention provides an electrical connector assembly comprising a receptacle member having front and rear opposed walls, first and second side walls, a pair of opposing first floor members and a pair of opposing second floor members. The receptacle member also has first and second mating rearwardly extending mounting flanges having first and second transversely extending tabs, respectively, and a cover having a rearwardly extending mounting flange having a rearwardly extending pair of tabs. The connector assembly further comprises a first electrical contact having a first mounting portion, a second mounting
